CTUNIPAR01

UNIVERSAL STEERING WHEEL INTERFACE

CAN BUS PROTOCOL

USER GUIDE

CTUNIPAR01:
It is set to work with phone buttons, but it is possible to programme it, also for cars which do not have these buttons.
(in this case you will use the audio control buttons)

SOFTWARE PROGRAMMING PROCEDURE

1 - Open the unit
2 - Press the button near the wire connector till the red led turns on and stays still
3 - Release the button
4 - Press & release the button several times till you reach the number of flashings needed.

> If your car doesn't have **ANY** phone button, the red led should flash
> **once every 10 seconds.**

> If your car has **ONE** phone button, the red led should flash
> **4 times every 10 seconds**

> If your car has **TWO** phone buttons, the red led should flash
> **3 times every 10 seconds**

5 - Confirm the software programming procedure by pressing the button until the red led turns on again and stays still, now release the button, disconnect and reconnect the 16-pin connector of CTUNIPAR01.

**THE PROGRAMMING PROCEDURE SHOULD BE DONE
WITH THE UNIT CONNECTED**

WARNING:
Please, follow the above explained procedure only if your car doesn't have any phone button, or for all those cars which are not mentioned on this user guide.

ALTERNATIVELY:
Some car models may have either 1 or 2 phone buttons, for ex. some Volkswagen models have 2 phone buttons instead of 1, with these cars CTUNIPAR01 is set to work by default with one phone button; in this case please change the unit setting as described above.

SOFTWARE SETTING

Before installing the CUNIPAR01 interface , you need to set it up according to your car make in order to choose the dedicated software.
Shift the switches with care using a small screwdriver .

CTUNIPAR01 IS SET BY DEFAULT FOR MERCEDES CARS, YOU WOULD NEED TO SHIFT THE SWITCHES ONLY IF YOU OWN ANOTHER CAR MAKE.
