ABOUT

The Connects2 Infodapter for Fiat 500X 2015> vehicles allows vehicle setting and parking sensor information to be displayed on any aftermarket head unit with rear camera input. The Infodapter also allows the use of the steering wheel controls with almost every steering wheel control compatible head unit on the market.

DIP SWITCH SETTINGS
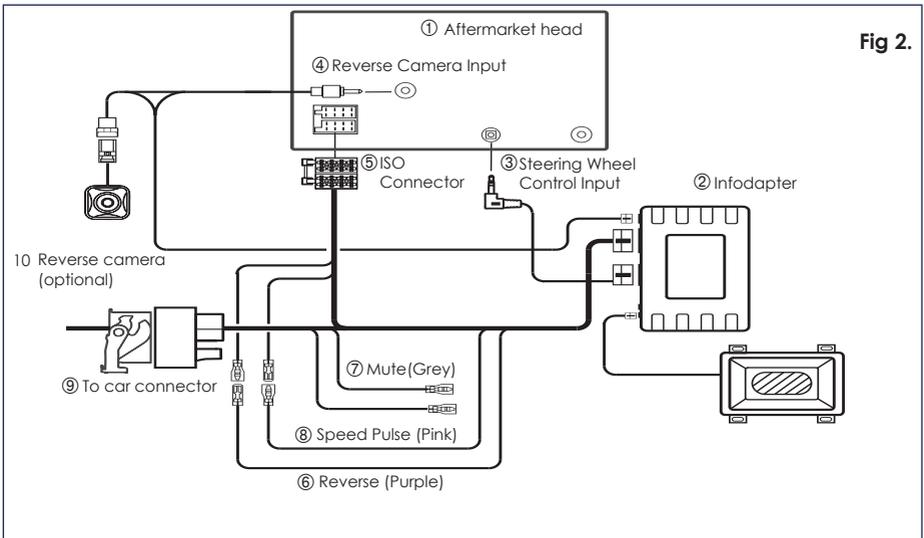

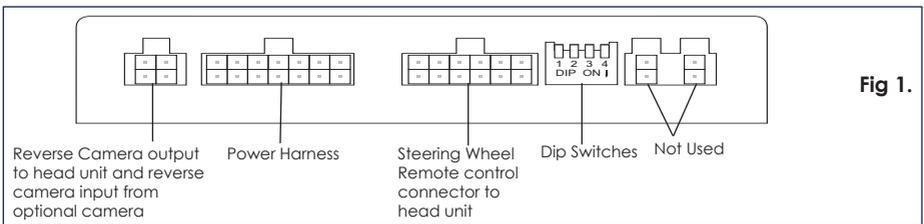

See Fig 1.

Up = Off, Down = On

1: On = Pioneer head units. Off = All other head units

2: Setting for reverse camera. On = PAL, Off = NTSC. The default setting is Off (NTSC).

3: Resets the display settings back to default. If the display settings have been manipulated in a way that it is no longer possible to make adjustments, change the DIP switch #3 from Off to On and back. This will reset the screen settings to the factory defaults. During this procedure the screen background will change to red. While the background is red, no settings can be made.

4: Not applicable

Interface Connections

Reverse Camera output to head unit and reverse camera input from optional camera

Power Harness

Steering Wheel Remote control connector to head unit

○   Preferences -

Park Assist Version - Select according to the
colour configuration of the park assist fitted to
the vehicle.

Camera Connected - Select Yes if an optional
camera is connected.

Reverse Priority* - Select which image (Camera
or Park Assist) will be shown by default when
reversing. The driver can select the desired
image by pushing the Source button (Fig.3)
while reversing. (*Note this option is only
available when Camera Connected is set to
Yes)

Park Brake Source - Set to Speed, Brake or
Always On.

Restore factory settings - Reverts all
Infodapter settings to factory defaults.
(This does not restore vehicle settings)
